

Fabric specifications Outdoor Tension Lightbox 100

The Outdoor Tension Lightbox 100 requires a non-stretch backlit PVC banner with silicone edge. The banner is tensioned into the frame using the internal tilt profile. After tensioning, the silicone strip is completely locked in place. This simple system allows you to change your graphics quickly and easily.

SEG fabric size

We recommend producing the PVC fabric with silicone edge 14 mm smaller than the outer dimensions of the frame (frame size minus 14 mm).

Corner preparation

For the best result, cut the silicone edge diagonally at each corner before installation.
